Quadra-Lift® Air Suspension System

This revolutionary system gives you ultimate control of your suspension by raising your vehicle's ground clearance up to a maximum of 66mm higher than the vehicle's standard ride height. You can also lower it by 38.1mm for easy entry, exit and loading. The system will raise the vehicle from back to front to help keep headlights focused down on the road.

TECHNICAL SPECIFICATIONS

POWERTRAIN

Engine	3.6 with VVT
Displacement (cu in)	3604
Horsepower (kW (HP) @ RPM)	210 (284) @ 6350
Torque (NM @ RPM)	347 @ 4300
Axle Ratio	3.45 : 1
Fuel System	Sequential multipoint, electronic fuel injection

Variable Valve Timing (VVT) — VVT offers increased engine breathing throughout the rpm range by varying the degree that the valves open and close in conjunction with the piston position. Results are tangible: better performance, more efficient operation and increased torque for towing and hauling.

Transmission — Driver-interactive manual control via steering wheel paddle shifters and electronically modulated torque converter clutch.

BODY/SUSPENSION

Body Design

UniFrame construction: body panels and frame members welded and bonded into a single unit.

Suspension

Front: short/long arm (SLA), coil springs, gas-charged, twin-tube coil-over shock absorbers, upper and lower control arms ("A" arms) and stabilizer bar.

Rear: multilink rear suspension, coil springs, twin-tube shocks (including load-leveling for towing), aluminum lower control arm and independent upper links (tension and camber) plus a separate toe link.

Steering

Electro-hydraulic power steering (V6).
