A UNIQUE PLACE IN HISTORY

From the original Elite to the latest Evora, Lotus has remained true to its founding principles. Lightweight construction, efficient use of the minimum number of parts, a perfectly balanced chassis and tactile, communicative steering are evident in every driving icon to proudly carry the Lotus badge.

Since the day Colin Chapman established Lotus in 1952, the company has never ceased to innovate. This has earned Lotus a distinguished place in motorsport history. In Formula 1 alone, Lotus has achieved 81 victories, 102 pole positions and 13 World Championships from over 500 Grand Prix starts. Lotus designs have also beaten the best in World Rally, Le Mans, Indy Car, Touring Car and numerous Sports Car and GT classes around the world.

Colin Chapman applied pioneering, lightweight engineering to every one of his race and road cars. He is widely regarded as one of the most influential automotive engineers of all time. From the

introduction of the monocoque chassis, to aerofoil wings, 'ground effect' and active suspension, Chapman's innovations changed racing car design forever. Lotus continues to push the boundaries of automotive design and engineering today with expertise in lightweight construction, performance electronics, the bonded aluminium chassis, the world's only mid-engined 2+2 sports car and industry benchmark steering, ride and handling. A deeply ingrained passion for innovation remains at the heart of everything Lotus does today.

PERFORMANCE THROUGH LIGHT WEIGHT

Throughout the 1950's, Lotus constructed a series of aerodynamically advanced, lightweight Sportsracers. Typified by the revered Lotus Eleven that won its class at Le Mans in 1957, all were spectacular examples of Colin Chapman's ethos. His passion for innovative, lightweight engineering was best encapsulated by his famous quote from the launch of the Lotus Seven in 1957: "to increase performance, add lightness".

Chapman's engineering ideals, proven time and time again in the toughest of environments, are more relevant today than ever. They live-on in the celebrated Lotus Elise. Launched to great acclaim in 1996, this mid-engined, rear-wheel drive, ultra-light thoroughbred redefined the sports car once again. Its revolutionary, bonded aluminium chassis delivers the ultimate driving sensation, providing

exceptional feedback with thrilling acceleration and extremely low running costs for the performance on offer. Over two decades later, it remains unmatched for precision, agility and pure driving engagement.

Today, the Lotus Lightweight Laboratory maintains Colin Chapman's legacy and ensures that his ethos is applied to every new model. After a complete strip down, every component is assessed and optimized through redesign, change of material, change of supplier or integration. If one part can be made to do the job of several, this is where it happens. Improvement is continuous. The quest to add lightness never ends. The result is the fastest, most exciting, most capable range of road cars Lotus has ever built.

BUILT-IN PERFORMANCE

The name Lotus is synonymous across the world with sublime handling and exceptional vehicle dynamics. The key to it all is that every Lotus is designed and engineered from scratch with a singular focus. Every Lotus is purpose-built to be a pure sports car.

Any mass-produced saloon or hatchback can be made to go faster but it's never the optimal starting point for a performance car. For that, you need an exceptionally light, rigid chassis designed by a company with seven decades of elite-level motorsport experience. Every Lotus, from the Elise Sport 220 to the Evora GT410

Sport, benefits from a bespoke, motorsport tested, bonded aluminium chassis. The pioneering process of bonding aluminium extrusions remains state-of-the-art today and provides the ideal platform for some of the highest quality suspension components to be found on any road car.

Each and every Lotus car features the optimal, cost-no-object design of unequal length double wishbones for superior kinematics, absolute precision, intuitive response and maximum tyre grip. With all four contact patches optimally controlled, the Elise can generate astonishing cornering forces from modest tyres.

Very few car companies today offer such high quality suspension across the range. Then again, very few car companies focus exclusively on purpose-built sports cars.

The other secret to world-renowned ride and handling expertise, is the on-site test track at Hethel. A luxury enjoyed by few other car makers, it allows Lotus to develop cars faster and more intensively. Every Lotus is painstakingly honed to extract every last drop of dynamic performance from each component – remaining true to Colin Chapman's principle of performance through light weight.

LOTUS **ELISE**

LOTUS ELISE INTRODUCTION

The Lotus Elise continues to be hailed as one of the finest driver's cars available at any price. The torchbearer for Colin Chapman's ethos of performance through light weight, it remains the purest useable sports car in production today. The latest generation to carry the evocative name retains the supple road holding, fluid dynamics and tactile feedback of the original and combines this with stunning performance, low CO2 emissions and remarkable efficiency.

As you'd expect from a thoroughbred, mid-engined sports car, its compelling agility is built-in to every component. The lightweight, rigid, bespoke chassis supports optimal, finely tuned, double wishbone suspension for absolute handling precision. No other sports car tackles the open road with the verve of an

Elise, where every driver input has such a clear and immediate effect on the car's behaviour. Even more remarkable than the intuitive, instant response is the communication coming back to the driver. The unassisted steering remains an industry benchmark and dynamic delight, full of richly detailed feedback, keeping the driver informed and connected with the car, the tyres and the road. It is this unrivalled intimacy between man, machine and road surface that makes the Elise so endlessly rewarding to drive at all speeds.

The Elise range now starts with the potent supercharged, chargecooled Elise Sport 220. Above that, the performance gets even more serious and track focused with the deeply capable, downforce generating, Elise Cup 250.

LOTUS ELISE SPORT 220

As athletic as the name suggests, the Sport 220 is the culmination of over twenty years of Elise development. Lighter body panels front and rear help achieve a kerb weight of just 924kg, making the Sport 220 the lightest Lotus currently available. As such, it's the torchbearer for performance through light weight - a virtuous circle more desirable and relevant than ever. The low mass multiplies the potency of the compact, all-alloy, supercharged and chargecooled 1.8 litre four-cylinder. It rockets the Sport 220 from zero to 60mph in just 4.1 seconds, on to a maximum speed of 145mph. Yet the cold numbers don't do the driving experience justice. The poise, the balance, the immediacy, the delicacy, the intimate connection to the car and the road will make an even greater impression than the rush of full throttle acceleration. Control weights are meticulously balanced. The exposed gear linkage saves weight, adds precision and mechanical tactility. The unassisted steering remains an industry benchmark for vivid communication, fingertip delicacy and intuitive response. Crucially, the Elise Sport 220 delivers unsurpassed driver involvement at all road speeds.

LOTUS ELISE CUP 250

Intensely thrilling on the road and built for true stamina on track, the Elise Cup 250 demonstrates the circuit prowess you would expect from a 7 times F1 World Champion. A scintillating blend of agility, power, grip, balance and communication elevates the Cup 250 to an elite level of vehicle dynamics. The compact, all-alloy, chargecooled, supercharged 1.8 litre four-cylinder has been uprated to a potent 245bhp. A figure amplified by the ultra-low mass for an intense 263bhp per ton, 0-60mph in just 3.9 seconds and a top speed of 150mph.

The Cup 250 combines the celebrated virtues of the iconic Elise with highly advanced aerodynamics, generating 131kg of downforce at 140mph. The result is uncanny high-speed stability, sharper turn-in, increased grip and supreme composure. However, this thoroughbred track car did not forget its road manners. One of the many benefits an unladen weight of just 931kg is the opportunity to achieve exceptional body control with compliant suspension. Back down at road speeds, you'll have time to notice the meticulously balanced control weights. The

exposed aluminium gear linkage saves weight, adds precision and mechanical tactility. The renowned unassisted steering communicates with rich detail and vivid clarity for unrivalled driver involvement. However, to fully appreciate the monumental grip generated by the Yokohama Advan A052 tyres, you will need to visit a race circuit. The Cup badge is not for show. It's the mark of a car that was built to lap hard all day without complaint and could be raced competitively by adding no more than a roll cage. Bred for the track, brilliant on the road, the Cup 250 is a sports car icon at the very top of its game.
