

Mercedes-Benz eVans

Mercedes-Benz

Discover the benefits of the Mercedes-Benz eVans.

Without doubt: the future is electric. And we are ready. Ready for something new. All-electric mobility means no local emissions, virtually silent movement and superlative response. In short, an all-new driving experience and a forward-looking form of mobility that is reminiscent of the pioneering achievements of 130 years ago.

In metropolises you have free access with an eVan from Mercedes-Benz, while vehicles with internal combustion engines are increasingly affected by entry restrictions or even entry bans. In addition, you may be able to benefit from government subsidies and discounts for electromobility. Take advantage of the low operating costs and enjoy a fascinating driving experience: when you press the accelerator in a Mercedes-Benz eVan, you will experience how the power from the high-torque electric motors is immediately converted into impressive propulsion.

Is it important for you to make your mobility as sustainable as possible? Do you drive your vehicles mainly in urban areas? Do you drive predictable routes that match the range of the eVans? Then you should get into electric mobility with an eVan from Mercedes-Benz and get started.

Environmentally friendly

With eVans, you drive at least locally with zero emissions and your vehicle does not need any oil for engine lubrication. If the electricity for the electric vehicle is generated from alternative energies, the drive does not produce any CO₂ emissions.

Lower costs per kilometre

The cost of electricity per kilometre of mileage is usually well below the fuel costs for internal combustion engines.

Low maintenance and wear costs

Electric vehicles have fewer moving parts than vehicles with internal combustion engines and, thanks to recuperation, their brakes are placed under less strain. This reduces the costs for maintenance and typical wear parts.

Agile driving behaviour

The almost noiseless electric drives offer a special driving experience with impressive acceleration.

No compromises for the interior

The batteries of electric vans are generally stored in the underbody of the vehicle, so there's nothing taking up space inside.

Positive image

A van with electric drive from Mercedes-Benz is progressive and environmentally friendly and thus strengthens your image.

On-demand charging options.

Thanks to the Combined Charging System (CCS) you are very flexible with the eVans from Mercedes-Benz when it comes to charging stations and wallboxes. The charging cable just needs to be plugged into the CCS vehicle socket (Combo 2).

Did you know that you can precondition the climate in many Mercedes-Benz eVans while they are charging? A real plus in comfort, because you start your journey in a vehicle with a pleasant temperature. In addition, you can achieve a greater range because you do not need any energy to heat or cool the interior at the start of the journey.

The battery of a Mercedes-Benz eVan can also be charged at home from the household network using the appropriate charging cable.

Wallboxes offer another charging option. At home you can install the compact, high-quality Mercedes-Benz Wallbox Home, for example, which charges electric vehicles with a charging capacity of up to 22 kW quickly, safely and conveniently.

The fastest way to charge is at fast charging stations, which are usually found on important traffic routes and which are constantly growing in number.

Use electrical energy as efficiently as possible.

The intelligent operating strategy of the Mercedes-Benz eVans ensures that energy is used as efficiently as possible: With up to 5 recuperation levels and up to 4 driving programs, you can choose between maximum comfort and maximum range. How does recuperation actually work? In the recuperation stages, the vehicle also decelerates when you reduce the pressure on the accelerator pedal. The momentum of the vehicle is used here, and the kinetic energy is recovered in the form of electrical energy and fed into the high-voltage battery. You can use the recuperation levels to select how intensively electrical energy is to be recovered.

The recuperation levels

- D+** Dynamic and predictive strength of recuperation, based on data from the safety assistants, camera and navigation system.
- D+** The vehicle "coasts"; there is no recuperation
- D -** Further increased recuperation torque
- D --** Maximum recuperation torque, enables "one-pedal driving"

The drive programs

- C** Full drive power with high heating and air conditioning output
- E** Range-optimised, offers slightly less power and torque with good heating and air conditioning
- E+** Designed for maximum range, engine output and heating and air conditioning output reduced
- S** Focus on sporty driving performance with full power and maximum torque as well as high heating and air conditioning performance

The new EQV.

For the next generation. #MakeYourMove

The EQV combines the generous feel-good space of a Mercedes-Benz MPV with a well thought-out electric drive concept and a long range. The electric motor with **150 kW** (204 PS) and up to 365 Nm torque impresses with great pulling power, high efficiency and smooth running. The EQV is available with 60 kWh¹ and 90 kWh battery capacity as well as in the length variants long and extra-long. The large usable capacity of the high-voltage battery with 90 kWh and the optional fast charging capability of up to 110 kW* enable long ranges and short charging stops. In addition, the EQV is optionally available with EQ-specific design elements and extensive equipment.

This makes the EQV the right vehicle for all those who want to show how progressive and sustainable mobility can be today. Thanks to its versatility and spaciousness, the EQV is perfect for everyday life and the leisure time of families. As a commercially used vehicle, with the EQV you get a business saloon in which you can work and travel comfortably – and a leisure van that meets the highest demands after work and on the weekend.

A range of up to 418 km*
with 90 kWh battery capacity

A luggage compartment
volume of up to 1410 l

Only approx. 45 minutes* charging time
from 10 to 80% at a rapid charging station
with 90 kWh battery capacity

Maximum 8 seats

Front-wheel drive

Multimedia system
Mercedes-Benz User Experience (MBUX)

¹ Expected to be available from 12/2021

Makes driving a pleasure.

You are very flexible when it comes to interior equipment: The seating options range from the 4 standard individual seats to the bunk package to 3-seater bench seats in 2 rows of seats. There is also a practical table package for the rear. The ergonomic seats at the front increase the sense of well-being with the standard seat heating. Seat air conditioning is also available as an option.

When it comes to comfort, you don't have to forego anything in the EQV: the sliding door on the left for easy entry and exit, the panoramic sliding roof for plenty of light and air in the interior, and the stylish ambient lighting are just a few examples of the extensive range of comfort features.

With the help of the pioneering MBUX (Mercedes-Benz User Experience) multimedia system, you can operate the EQV with ease. Start voice control with a "Hey Mercedes" and use it to effortlessly control many vehicle functions – for example, pre-entry climate control, navigation with Electric Intelligence and charging settings.

Equipment highlights

The **navigation system** can be controlled simply and intuitively by means of voice control and the LCD touchscreen display with a screen diagonal of 26 cm (10.25 inches), and thanks to its numerous functions, it helps bring you quickly and safely to your destination.

The **standard Driving Assistance Package** promotes safe and relaxed driving by means of the 3 intelligent systems Active Brake Assist, Lane Keeping Assist and Blind Spot Assist. As a result, it can help to avoid accidents or reduce their consequences.

The **Pre-entry climate control** ensures a pleasant temperature in the vehicle prior to departure, which is a great improvement in comfort particularly in hot or cold outside temperatures. It also conserves the battery if activated during the charging process.

With an original front design and further high-quality design and equipment characteristics, the **EQV Exterior Design Package** increases the exclusivity and sportiness of the vehicle.

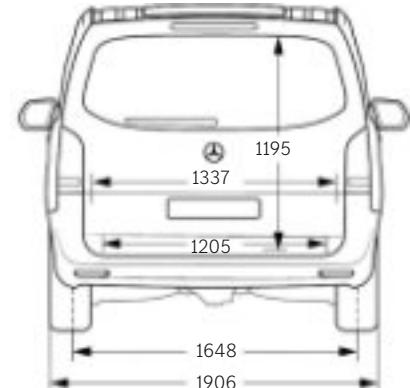

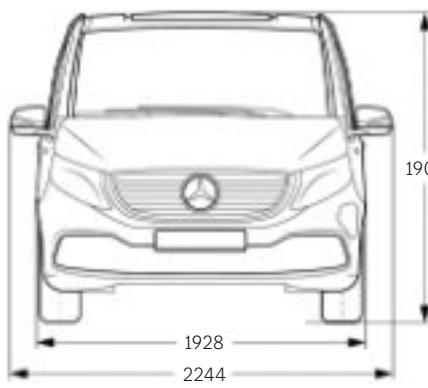

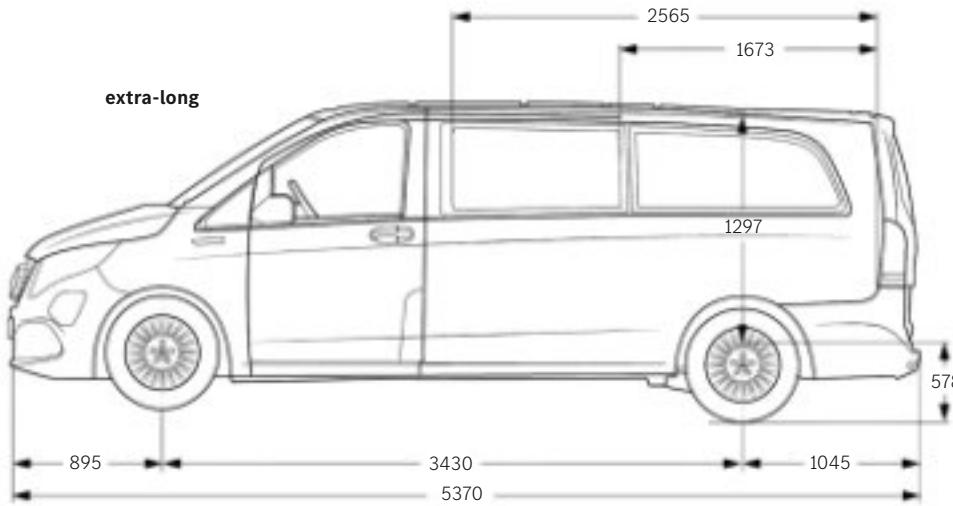

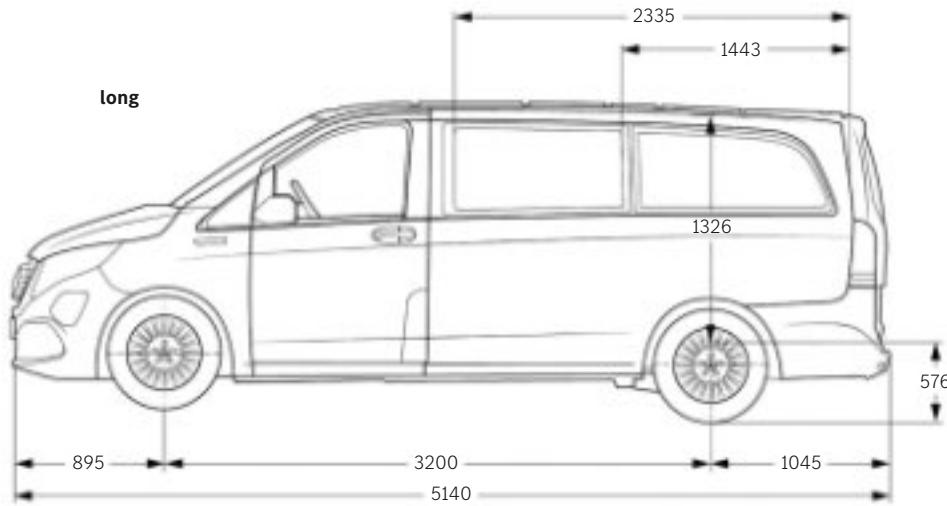

With numerous features finished in blue and rose gold, an exclusive trim element and further high-quality details, the **EQV Interior Design Package** brings an innovative style to the vehicle interior.

The **Burmester® Surround Sound system** brings exciting surround sound into your vehicle with an excellently tuned amplifier and speaker system. Together, the 15 loudspeakers and bass reflex box achieve an output of 640 W.

¹ The package is only available for customers in conjunction with a private Mercedes me account.

The eVito Tourer PRO.

A range of up to 421 km*
with 90 kWh battery capacity

Electric motor with
maximum 150 kW (204 hp)

Only approx. 45 minutes* charging time
from 10 to 80% at a DC fast charging
station with 90 kWh battery capacity

Max. 8 plus 1 seats

Pre-entry climate control

3,500 kg gross vehicle weight

Countless possibilities.

The eVito Tourer PRO is just as functional, safe and comfortable as you would expect from a Mercedes-Benz Vito. Its highly efficient electric motor has a maximum output of **150 kW** (204 hp) and a torque of up to 365 Nm. The Midsize eVan from Mercedes-Benz, available as a long and extra-long version, is available with a battery capacity of 60 kWh¹ and 90 kWh. The large usable capacity of the high-voltage battery with 90 kWh and the optional fast charging capability of up to **110 kW*** enable long ranges and short charging stops. In the spacious interior with up to 8 seats plus driver you have no restrictions thanks to the electric drive. If you operate professional passenger transport and want to present yourself as an environmentally conscious, progressive company, you will certainly cut a fine figure with the eVito Tourer PRO. After work and at weekends, you can enjoy the eVan as a spacious leisure van. The innovative eVito Tourer PRO is just as suitable for everyday use and leisure for families.

The preconfigured seating equipment with two 3-seater bench seats in the passenger compartment can be perfectly adapted to individual requirements with numerous variants: for example, with the two-seater front passenger bench or the 3-seater bench seat as a comfort bunk in the passenger compartment.

The eVito Tourer PRO will put you in a good mood with its spacious cockpit. You can cope with long journeys and stay as relaxed as possible on the robust and comfortable seats. In the cold season, the standard seat heating is a valuable extra for the driver.

The range of assistance systems for the eVito Tourer PRO is exemplary in the mid-size van segment. In addition to numerous standard assistance systems, the Driving Assistance Package, the Active Distance Assist DISTRONIC or the reversing camera are also optionally available.

¹ Expected to be available from 12/2021

Equipment highlights

Thanks to the **digital rearview mirror** you can see the traffic situation behind your vehicle – even when a direct view to the rear is not possible. The camera records a view of the area behind the vehicle and shows the image on the inside rearview mirror.

The **Audio 40** multimedia system with touchscreen and integrated navigation will impress with its numerous communication and infotainment possibilities. You can operate all functions in the familiar way using the 17.8 cm (7-inch) touchscreen.

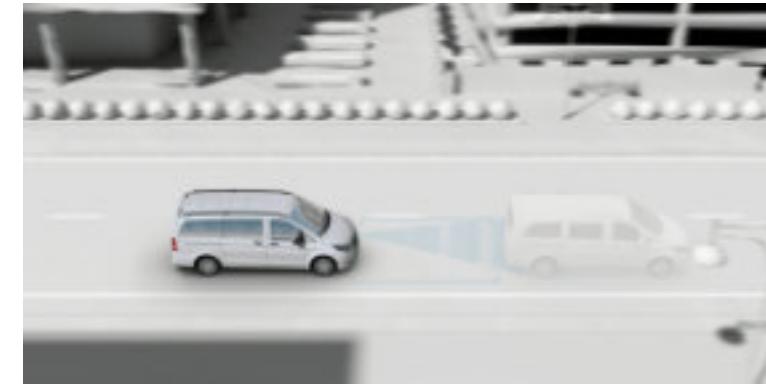

The **AIRMATIC** air suspension impresses with its outstanding suspension and damping comfort, which constantly adapts to the prevailing road conditions.

The **LED Intelligent Light System** improves the driver's vision and therefore driving safety, as it can adjust the illumination of the road surface to various driving conditions.

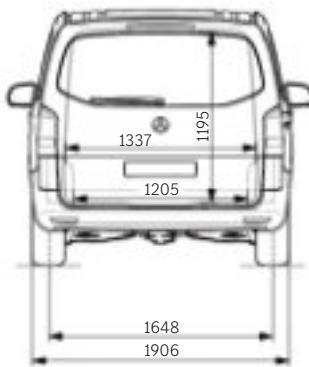

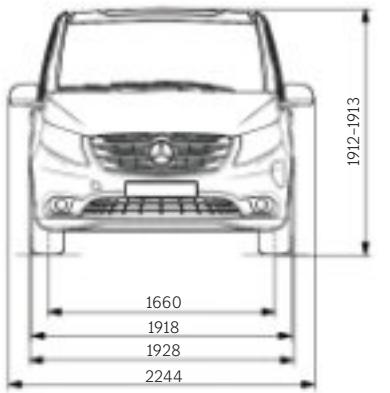

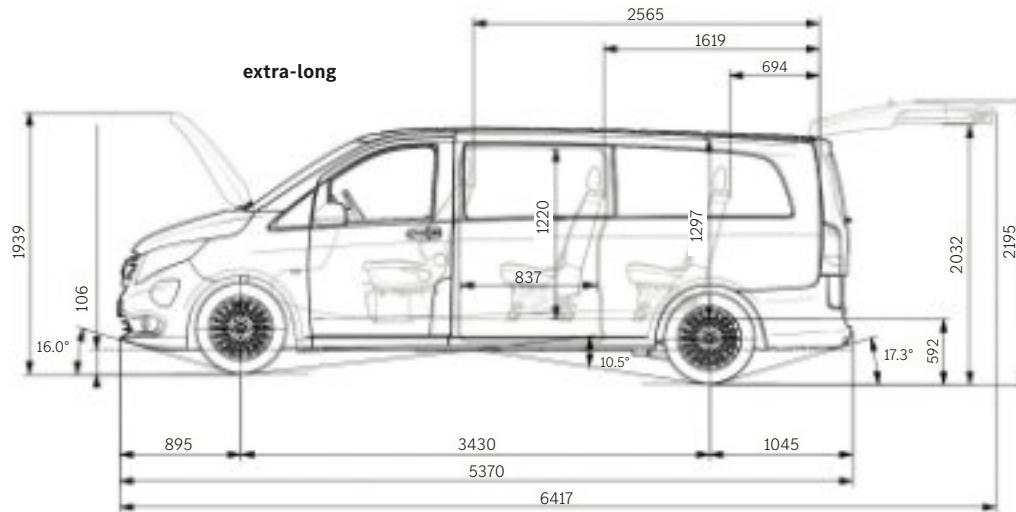

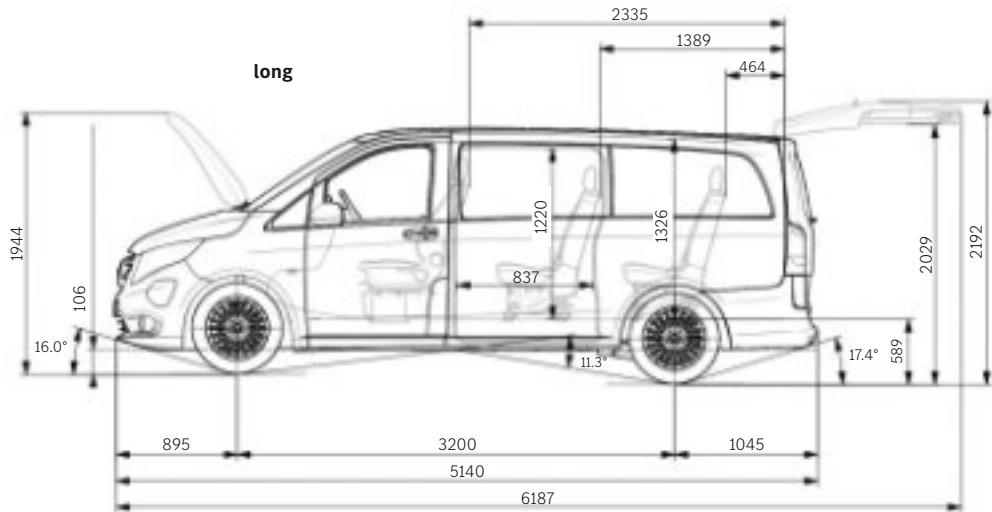

In addition to a folding table, the **Table Package** contains many functional extras to make your stay at the rear of the vehicle more pleasant.

Active Brake Assist can help to avoid accidents with vehicles in front and with pedestrians crossing the road or can mitigate the consequences of the accident. If a risk of collision is detected, it first warns and, if necessary, then initiates autonomous emergency braking.

Specifications & Dimensions

¹ Expected to be available from 12/2021

The eVito Panel Van.

Up to 184 km* range

Electric motor with
maximum 85 kW (116 hp)

Approx. 6 hours* charging time
from 0 to 80% with up to 7.4 kW and
alternating current (AC)

Space for up to 3 Europallets

Front-wheel drive

3,200 kg
gross vehicle weight

Everything you need for advanced mobility.

If you are looking for a robust mid-size van with an electric drive, the eVito Panel Van is the perfect solution. With its cargo space of up to 6.6 m³ and a cargo area of up to 4.76 m² in the extra-long version, you have no restrictions whatsoever due to the electric drive. The highly efficient electric motor provides a maximum output of **85 kW** (116 hp) and a torque of up to 295 Nm for the agile driving performance of the eVan. With its extensive range of equipment, you can equip the eVito panel van just as functionally, safely and comfortably as you are used to from a Mercedes-Benz Vito. With a range of up to 184 km*, the eVito panel van is particularly suitable for tours in urban areas. In the coming years, increasing entry restrictions for vehicles with internal combustion engines are to be expected there. The eVito Panel Van is an excellent choice if you want to present yourself as a future-oriented company and want to drive your tours in an economical and environmentally friendly way.

The eVito Panel Van will put you in a good mood with its spacious cockpit. You can cope with long journeys and stay as relaxed as possible on the robust and comfortable seats. In the cold season, the standard seat heating is a valuable extra for the driver.

Well entertained, well informed: the information and communication systems with numerous interfaces ensure the best connections and good entertainment if desired. Operation of the optional Audio 30 and Audio 40 multimedia systems via a touchscreen is intuitive and convenient.

The spacious load area with a continuous partition and lashing eyes on the load area floor offers space for up to 3 Euro pallets. Loading takes place through the rear and through the sliding door on the passenger side. A sliding door on the driver's side is optionally available.

Equipment highlights

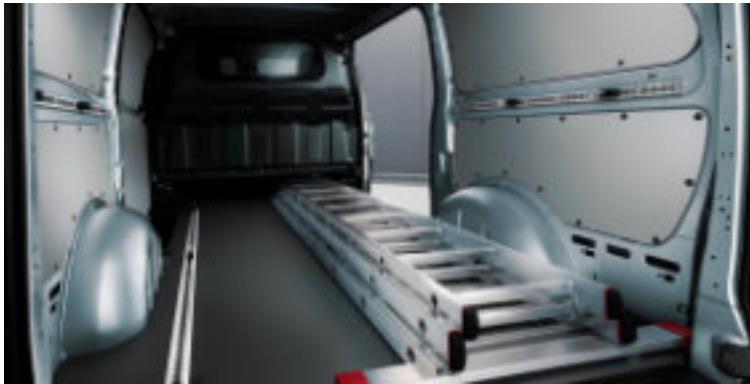

Thanks to the **2-seater co-driver's bench seat**, there is an extra seat in the cockpit with a three-point seat belt, seat belt warning function and height-adjustable headrest.

The **Vito Mirror Package** uses automatically dimming mirrors and electrically folding outside mirrors to increase the driving comfort and driving safety.

The **double-wing rear doors** can be opened back to the sidewalls and secured, making loading and unloading easier.

The **EASY CARGO Package** makes for easier loading and unloading in addition to providing added safety during cargo transport. The basis for this is provided by the rugged wood floor. It protects the metal surfaces and wood panelling of the load compartment.

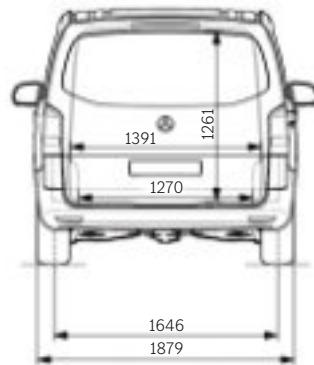

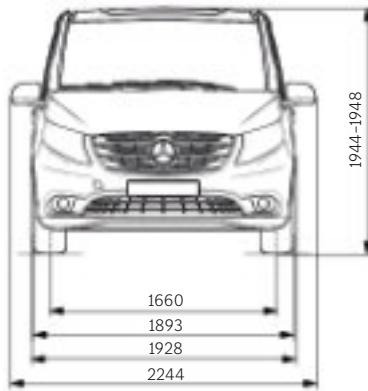

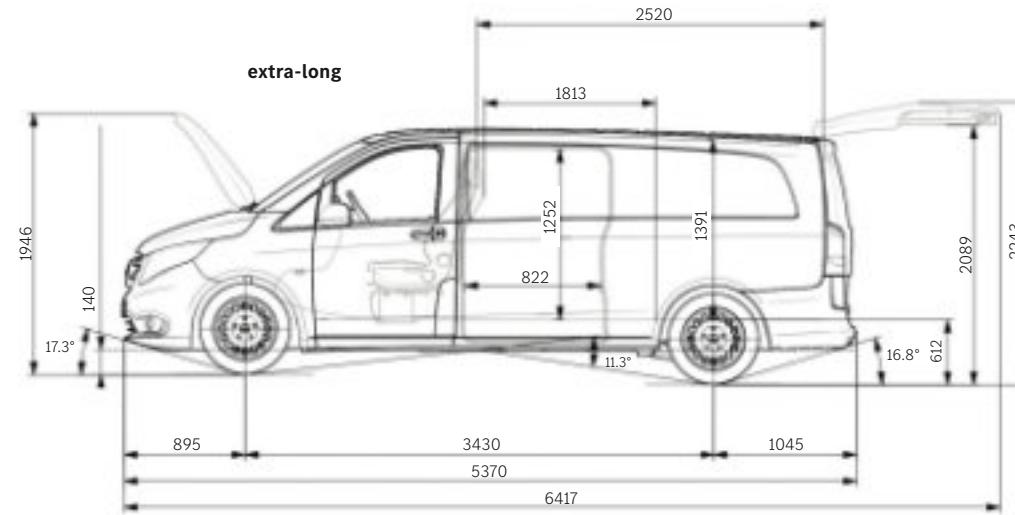

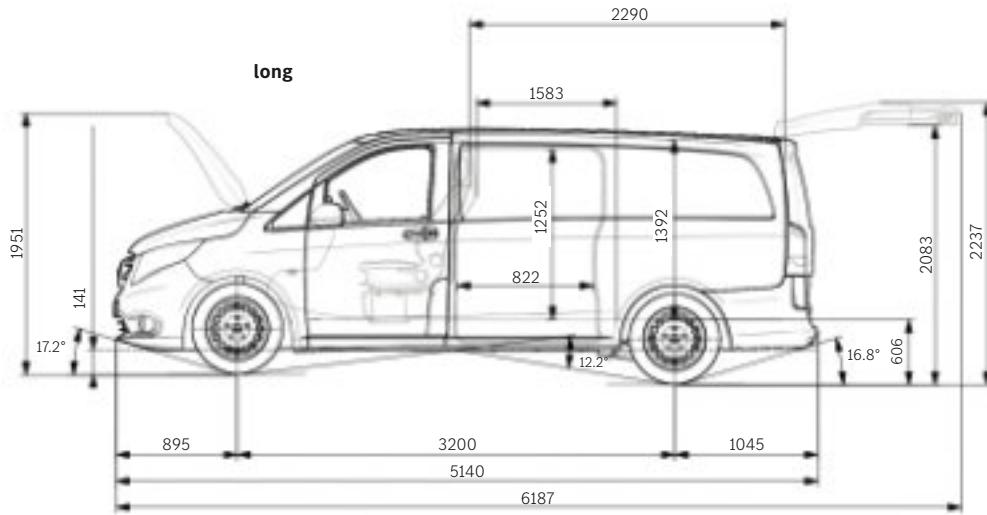

The **load anchoring system** allows proper and flexible securing of the load. Objects can be secured on the 2 anchoring rails on the load compartment floor with the help of the optional lashing eyelets and securing straps.

The **reversing camera** assists you when parking and manoeuvring: it displays the area behind the vehicle, which you cannot see directly. As a result, damage caused when parking and manoeuvring can be avoided.

¹ The package is only available for customers in conjunction with a private Mercedes me account.

Specifications & Dimensions

eVito Panel Van

Usable battery capacity 35 kWh

Installed battery capacity 41 kWh

Up to 184 km* range

Power consumption XX.X kWh/100 km*

Charging time of approx. 6 hours* from 0 to 100% with up to 7.4 kW and alternating current (AC)

3 drive programs „E+“, „E“ and „C“

4 recuperation levels „D-“, „D-“, „D“ and „D+“

Footnotes

* The power consumption and range were determined on the basis of regulation 692/2008/EC.

The power consumption and range were determined on the basis of regulation 2017/1151/EU.

* Maximum charging power at a DC charging station with 400 V supply voltage, 300 A current; the maximum charging power depends on various factors such as ambient and battery temperature and the battery state of charge at the start of charging.

* Minimum charging time from 10 to 80% under optimum conditions at a DC charging station with 400 V supply voltage, 300 A current; the charging time can differ depending on various factors such as ambient and battery temperature and the use of additional ancillary consumers such as heating.

KIND'S AUTO SALES LTD

Please note: changes may have been made to the product since this publication went to press (XX.XX.XXXX). The manufacturer reserves the right to make changes to the design, form, colour or specification during the delivery period, provided these changes, while taking into account the interests of the vendor, can be deemed reasonable with respect to the purchaser. Where the vendor or the manufacturer uses symbols or numbers to describe an order or the subject of an order, no rights may be derived solely from these. The illustrations and descriptions may include accessories and items of optional equipment which are not part of the standard specification. Colours may differ slightly from those shown in the brochure, owing to the limitations of the printing process. This brochure may contain models and services which are not available in certain countries.

This brochure is distributed internationally. Information given regarding statutory regulations, legal requirements and taxation and the consequences thereof applies to the Federal Republic of Germany only and is correct at the time of going to press. Please consult your Mercedes-Benz Vans dealer for final details and for information about the statutory regulations and legal requirements which apply in other countries.

Storage of technical data in the vehicle: electronic vehicle components (e.g. airbag control unit, engine control unit etc.) incorporate data memory for technical vehicle data, such as alerts in the event of malfunction, vehicle speed, braking force or functionality of restraint and driving assistance systems in the event of an accident (audio and video data are not saved). These data are saved

only fleetingly as a snapshot in time, e.g. in the event of a malfunction report; for a very short period of time (a few seconds at most), e.g. in the event of an accident; or in aggregated form, e.g. in order to assess component wear and tear. The saved data can be retrieved via interfaces within the vehicle. They may be processed and used by trained vehicle technicians as a means of diagnosing and addressing possible malfunctions, or by the manufacturer for analysis purposes and as a means of improving vehicle functions further. If so requested by the customer, data may also provide the basis for further optional services. Transfer of the data from the vehicle to the manufacturer or third parties is only possible with appropriate legal authorisation (e.g. vehicle emergency call) or based on a contractual agreement with the customer and within the framework of data protection laws. Further information relating to the storage of data in the vehicle is provided in the Owner's Manual, a printed copy of which may be found in the vehicle or online at www.mercedes-benz.com.mt.

Return of end-of-life vehicles. You can return your Sprinter to us for environment-friendly recycling in accordance with the European Union (EU) End-Of-Life Vehicles Directive. But that day lies a long way off. A network of vehicle take-back depots and dismantlers has been established to make it as easy as possible for you to return your vehicle. You can leave it at any of these points free of charge and by doing so make an important contribution to completing the recycling process and conserving resources. For further information about the recycling and disposal of end-of-life vehicles, and the take-back conditions, please visit your national Mercedes-Benz website.
