Trailer coupling with ESP® trailer stabilisation

Expand your transport options: with this practical equipment you can hitch up both trailers or caravans and also mount cycle racks. The trailer coupling is ready for use in no time at all – and can be folded in again behind the rear bumper just as quickly when it is no longer needed.

Trailer coupling with ESP® trailer stabilisation (code 550)

Available on all model lines

Total incl. VAT £950.00

Optional equipment may change the CO₂ value, please check your desired specification on the online configurator

Operating safety is the top priority: to fold out the trailer coupling, you must first unlock it via the control button in the boot. As soon as the button light goes out, the trailer coupling is correctly engaged and is therefore ready for use.

Even when driving you can benefit from a comprehensive safety concept: the ESP® trailer stabilisation is able to intervene automatically in critical situations when driving with a trailer. The associated sensor system detects the trailer independently as soon as the electric plug is connected to your vehicle.

The ESP® stabilisation functions are automatically active from a speed of 40 mph. When undesired oscillating motions are detected, the Trailer Stability Assist actively dampens these with the aid of alternate brake actuation of each individual wheel. In most cases this is already sufficient to reduce dangerous oscillations. If necessary, the system additionally reduces the speed: for this, the engine torque is reduced and the vehicle is braked via all four wheels.

Trailer mode: in a menu on the central display, select your trailer type and enter the maximum permissible speed. This allows your vehicle to adapt the functions of the speed limit assistant for trailer operation, for example.

FIX4BIKE®: using the additional guide bolts for the FIX4BIKE® system, you can attach a suitable bicycle rack in a particularly safe and stable manner. This increases the maximum load capacity to 100 kg.

Digital Extras (vehicle must be paired to a Mercedes me ID and services must be activated)

Adaptive Distance Assist DISTRONIC – the system uses sensors to detect vehicles travelling in the direction of travel and regulates the pre-selected target distance via the touch control panels on the steering wheel – without you having to press the accelerator or brake pedal

- Speed limit function: The DISTRONIC proximity assistant can adapt the speed to recognised speed limits
- Restart function: The automatic restart function on motorways makes it easier for you to follow in stop-and-go traffic
- Route-based speed adjustment: When you approach a bend, for example, the system automatically reduces the driving speed. Once you have negotiated the bend, your vehicle will automatically accelerate to the speed you have set or to the set distance to the vehicle in front
- Functions when route guidance is active: If you have activated a navigation route and are approaching a route-relevant exit in the left-hand lane of the motorway, the system decelerates to an appropriate speed. This also works without active route guidance as soon as you press the turn signal indicator
