

THE NEW CAPTIVA

ULTIMATE PERFORMANCE

Diesel Engine 2.0 Liter DOHC

Experience all-new driving sensation;
bring your journey to a whole new level.
Gently respond at every step.

2.0 Liter Diesel Engine

A 4-Cylinder Diesel engine DOHC with 16 Valves technology, which provides common rail pressure at 1800 bars with fluctuant turbo with maximum power of 163 HP (PS) and 360 Newton/Meter of torque that gives driving a silent journey and save much more fuel, efficiently. Driving is entertainment, again.

ECM (Engine Control Module)

Communicates directly to the engine via a computer system, allowing for smoother and more efficient engine operation.

TCM (Transaxle Control Module)

Built to control both the driving and transmission systems relative to the engine's torque and driving speed for more efficient shifting in all driving conditions. The TCM also works in conjunction with the ECM for smoother engine operation and to reduce gear deterioration.

Gasoline Engine 2.4L Double CVC

the latest in Gasoline-engine technology
for superior power and driving performance.

ECOTEC 2.4 liter engine

A superior driving experience you can feel. The 4-Cylinder Gasoline engine with a Double CVC fluctuating valve system gives maximum power of 168 HP (PS) and 229 Newton/Meter of torque at 4,600 rpm. With advances in engine technology the ECOTEC engine is compatible with E85 gasoline, improved efficiency makes for a more environmentally friendly vehicle.

TRANSMISSION

The 6-speed automatic transmission engine and DSC (driver shift control) are designed to work with both types of engines.

The half-manual gear shifting will calculate the driving speed relative to the engine's torque vehicle speed to ensure more efficient shifting. It works in sync with both 4WD automatic systems and ESP systems to keep the car's stability in balance for the best driving performance in any situation.

* Standard accessories may differ according to model.

DYNAMIC EXTERIOR DESIGN

Automatic headlamp

Turns on automatically in low light situations and features a 4-level adjusting system. It also features an Automatic Parking Lamp system that keeps the headlamps on for 30 seconds after parking.

Electric adjustable foldable side view mirrors

with anti-fog heaters to help prevent the absorption of water droplets.

Fog lamp

For better driving vision.

Chrome front cowl

With a dual port chrome grill, live at the crossroads of sporty and stylish.

Sport-style curved chrome exhaust pipe

with 4 reverse mode sensors

Rear spoiler

that's the same color as car features third brake light plus separable back door.

Automatic Rain Sensor

turns wipers on at the onset of precipitation. It also adjusts wiper speed to the intensity of precipitation. The rear wiper blade turns on automatically when in reverse.

Optimized gripping

with stylish 19-inch alloy wheels and 235/50 R19 tires

LUXURY INTERIOR DESIGN

A cabin designed for the elite features 2 tones Grey-Black leather, 8-way electronically adjustable driving seats, adding more driving enjoyment. Comes equipped with a 5+2 seating system that adjusts for any situation. Add a third row to comfortably seat up to seven passengers, or fold it down to create more luggage space. It gives you room for everything you need, plus a 3-level, adjustable backseat air conditioning system to keep everyone comfortable.

Touch Screen

Size 7 inches equipped with multimedia system model.

- enjoy your entertainment from SD card (with MP4) and driving model system, digital driving data, average oil consumption, average speed driving time
- enable driving range from remaining fuel
- external temperature with digital compass and navigation system mode on touch screen demonstrate maps in 3D.

Cup holder

Between two front seats.

Storage Box

Glove Box

Between front passenger seats.

Remote Control

Foldable key with Immobilizer system to enhance protection from car theft.

Electric handbrake

A more comfortable design allows for a safer, more user-friendly electric handbrake.

Multi-Function Steering.

Multi-Function steering that not only controls the direction but also the audio system is equipped with automatic speed control (cruise control).

Gauge Optriton

Modern-looking, newly designed gauge features Crisp Ice Blue Illumination option that's gentle on the driver's eyes.

Smart Driving Control Panel

Designed to comfort the usage and fit in every aspect.

- Stability control system, ESP
- Rear Air Conditioning System
- Downhill speed control system, HDC

* Standard accessories may differ according to model.

**3 Dimensional
Sound Staging**

**delivers a superior 3-D sound system
that produces crisp audio quality.**

Whether you're listening to the radio, CD player, MP3 or WMA from the audio-in slot, the latest in 3-D micro processing audio technology from France delivers the best in state-of-the-art, high-contrast, high-definition audio. The system automatically adjusts the sound for both driver and passengers, delivering realistic sound.

SELF-BALANCING INTEGRATION

automatic balancing technology.

A strengthened driving work flow automatically links the transmission system (TRANSMISSION), driving system (POWERTRAIN), stability system (STABILITY) and suspension system (SUSPENSION) for optimal balance in all driving conditions.

STABILITY

To keep your journey safe and under control in every situation, the protection and 360° control system automatically work in sync with 6 functions:

Anti Wheel-spin and skid control system, TCS (Traction Control System)

In the event of slippage or wheel spinning because of road surfaces - such as gravel or uneven shoulder - the TCS will reduce power to each wheel to prevent loss of balance. It works in conjunction with the automatic 4-wheel drive system, AWD (Active on Demand 4WD). AWD will distribute the force to the appropriate wheels on each side to prevent the car from hitting any obstacles or losing control.

Anti-flip over, ARP (Active Rollover Protection)

The ARP detects the centrifugal force from a bad or sharp turn, properly redistributing the weight to each wheel to help regain control and keep the car from flipping over. (In proper speed and driving conditions.)

Stability control system, ESP (Electronic Stability Program)

The ESP evaluates the car's movement in relation to the car's turn direction. If there is a loss of balance the system will increase the braking force on each wheel as well as reduce the engine's power appropriately to help get the car back to normal balance and become more controllable.

Anti-wheel lock, ABS (Anti-Lock Braking System).

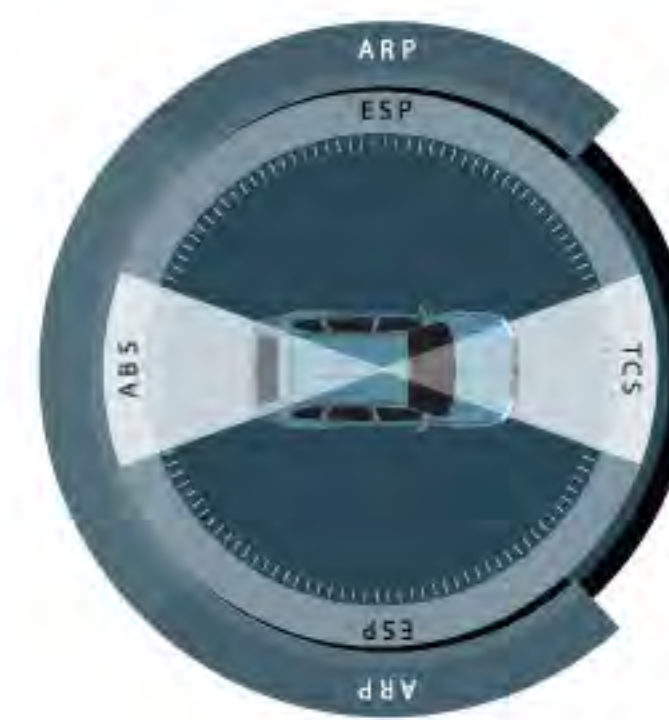

ABS automatically works when braking suddenly, in order to reduce the braking force and prevent wheel lock, allowing you to continue to drive and avoid obstacles. It works in conjunction with EBD and HBA.

Hydraulic reinforced braking system, HBA (Hydraulic Braking Assist).

The system will work if the driver doesn't press hard enough on the brake pedal. The system also calculates the speed during sudden braking to help increase stopping efficiency

Braking force distribution system, EBD (Electronic Braking Force Distribution)

EBD will distribute braking force to the front and rear wheels properly to help shorten the braking distance and keep the car's balance.

Picture shows a sharp turn to avoid sudden obstacles; ARP system starts by distributing the braking force to the left wheel in order to avoid overturning.

Picture shows how the ESP system works in conjunction with the TCS system in order to help maintain balance, control the car's skidding and prevent over/under steering.

Picture shows how the ABS brake system works in conjunction with the EBD and HBA.

SAFETY

Curtain Airbags deliver maximum protection from every angle and the monocoque structure offers a strong vehicle body from engine room to cabin according to international safety standards. Extra reinforcement with a high-performance computer calculated system in both front and rear crumple zones help prevent subsidence and reduce the deformation of the cabin from collision or rollover. It's equipped with retractable seat belts (Pretensioner Safety Belt) and Side Door Impact Beams for ultimate safety.

SUSPENSION

Feel the sensation of sensational with an independent 4-wheel, anti-shock system and front-wheel condensing disc brakes, the Chevrolet Captiva's suspension offers a smoother ride and provides excellent balance on all types of roads.

- In dependent Front Suspension (Macpherson Strut) together with torsion beam allows for a good balance and ensures the confidence of your driving.
- 4-spot multi-link independent rear suspension with Self-Levelizer system.

Self-Levelizer system

One of the Self Balancing Integration Technologies is the automatic lifting system, Self-Levelizer. The system will automatically lift itself when carrying more people, luggage or passengers. The rear choke-up lifts, keeping both the front and back of the car balanced, adding safety in all driving situations.

POWERTRAIN

Automatic Active on Demand 4WD system (AWD), with electronic command and control systems. In normal situations, the system will distribute power to the front wheels in 2-wheel drive mode to help save fuel. But when the road conditions change, such as driving on rough roads, slippery streets or in mud, the signal sensor will activate the electromagnetic differential system (Active Coupling) to redistribute the torque from the front wheels to the rear wheels automatically at the ratios of 50:50, 60:40, 70:30, or as appropriate to road conditions for the best performance in all conditions. It works in conjunction with the Intelligent Torque Reinforcement System (Active Torque On Demand) to help strengthen the driving system by distributing the appropriate amount of torque to the front and rear wheel axles to help balance and strengthen driving performance in various conditions.

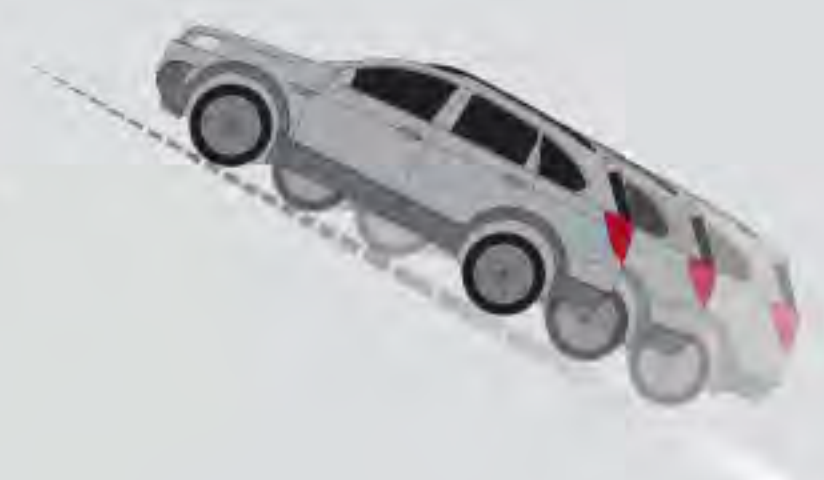

Downhill speed control system HDC (Hill Descent Control)

When driving downhill, just press the button to activate the HDC, and the engine and brakes begin working in conjunction to automatically reduce the speed of the car to make driving downhill safer.

Uphill rolling prevent system HSA (Hill Start Assist)

The HAS prevents the car from rolling away when trying to pull away on an up or down gradient by acting to hold the car stationary after the brake is released giving a driver more safely.
