Alexa Built-in makes it possible.

* NissanConnect Wi-Fi hotspot subscription or hotspot connection from mobile device required after 5 years.
**NissanConnect Wi-Fi hotspot subscription or hotspot connection from mobile device required to run third party apps.

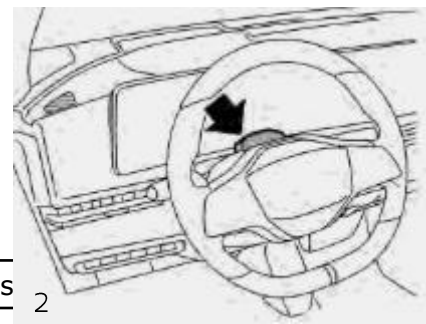

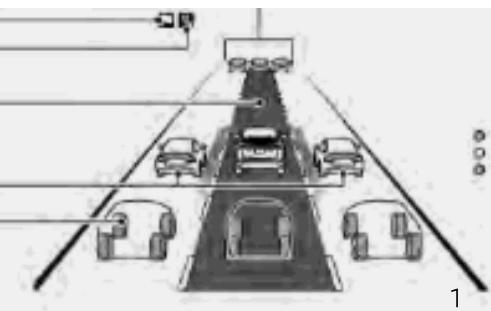

2025 Armada

What is ProPILOT Assist 2.1?

- ProPILOT Assist 2.1 is an advanced driver assistance technology that allows you to engage in hands-free driving under certain circumstances and road conditions.
- The main features of this system are Lane Change Assist & Hands-off driving (Steering Assist)
- Lane Change Assist: simply engage the turn signal and ProPILOT Assist 2.1 will automatically make the lane change for you at the next available & safe opportunity. Lane Change Assist (or Passing Assist) will also detect a slower moving vehicle ahead and suggest that the driver make a lane change
- Side sonar is also used to detect vehicles in the lanes beside you as well as vehicles that are detected surrounding you (1), just like ProPILOT Assist 1.1 detects the vehicle in front of you. This display is only available on HD mapped, limited access highways and when driving at speeds more than approximately 60km/h
- With Hands-off driving the steering assist function will engage and help keep the vehicle centered in its lane and maintain the speed set by the driver (if engaged) by using 3D map data to be able to control the vehicle based on this data in the most accurate way possible. If traffic and other conditions & laws permit and it's safe to do so, the driver can take their hands off the steering wheel and engage in hands-free & foot-free driving.
 - The driver monitor uses a driver facing camera located on the steering column (2) to monitor the driver's head position & direction, eye opening and eye direction to ensure that they are still paying attention to the road. If the monitor detects that the driver is distracted or no longer paying attention to the road, a series of warnings will appear in an effort to draw the driver's attention back to the road ahead. The driver should always be paying attention as they may have to manually take over controls at any given moment
 - When engaging in hands-free driving the driver should always be monitoring road conditions ahead in case they need to quickly take over the system.
 - The driver will receive 3 different warnings before the system fully disengages itself and the driver will see the messages "Manually Steer" and/or "Slowing to Stop" as well as an emergency sound

Please note images are based off of ProPILOT Assist 2.0 offered on the Nissan ARIYA in the US market – images may vary for ProPILOT Assist 2.1 on MY25 Armada
